User-Friendly Design

We've increased the typical space between the inner and outer cabinet and added a soft-plastic molding and beveled door panels. That means no more pinched fingers or damage to jewelry.

Pass-Through Shelf Option

Direct Line gives you a pass-through shelf option, providing almost 24 inches of clear front-to-back storage depth.

Universal Shelf Dividers

Other brands of rotary files require the use of different height self dividers depending on the media stored. And, since they attach to the shelves above and below, all shelves must be adjusted.

Not so with Direct Line Rotary Files. Our universal shelf dividers work with either letter or legal size units and attach only to the shelf below. That means no extra shelf movement or media movement.

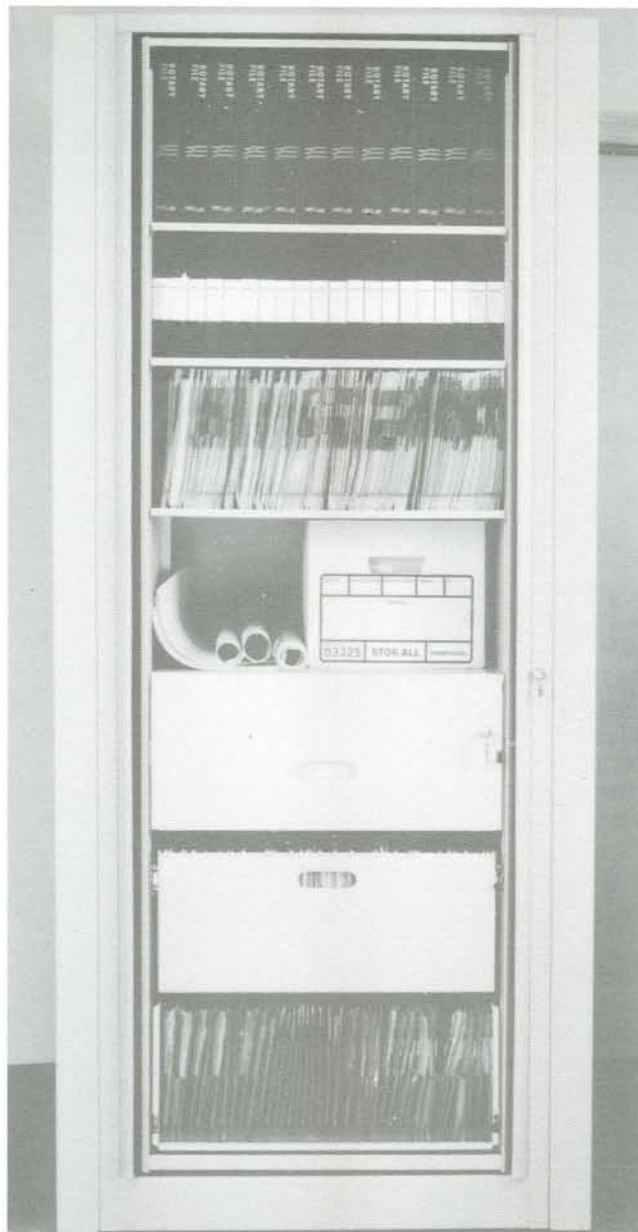

Easily Rearranged

Rearranging Direct Line Rotary Files is no problem. Simply move the units and add end panels. Our system requires substantially less labor, effort and cost.

No Foot Pedals

Direct Line's unique design eliminates the need for a protruding foot pedal, resulting in:

- More usable aisle space.
- No expensive foot pedal repairs.
- Safer walkways.
- A more ADA-friendly working environment.

Command Availability

The entire line of Direct Line Rotary Files and components in stocked colors are available for shipment within 48 hours.

Easily Expanded

The Direct Line Rotary File is designed for ease of system growth. Simply remove an end panel and add units to the left or right of the row. Other brands can only be expanded to the right and require the use of confusing starter and add-on units.

Less Costly To Relocate

Direct Line Rotary Files, unlike some other brands, don't require the purchase of special dollies costing nearly \$600. The Rotary File incorporates a specially designed base that enables it to be moved easily with a conventional hand truck.
